The multispecies coalescent

The multispecies coalescent

Incomplete lineage sorting

Incomplete lineage sorting

Incomplete lineage sorting in the great apes

Adding duplications and losses

Sarthak Mishra

Megan Smith

What is the history of this gene tree?

What is the history of this gene tree?

How many duplications?

How many losses?

When did duplication/loss occur?

Which genes are orthologs/paralogs?

How many trees are possible with 1 duplication?

How many trees are possible with 1 duplication?

The multilocus multispecies coalescent (MLMSCC)

The multilocus multispecies coalescent (MLMSCC)

Parent locus

Daughter locus

1. Every locus has its own gene tree drawn from the MSC

Duplications follow the local gene tree

It gets more complicated

It gets more complicated

It gets more complicated

2. Duplications (and losses) follow the gene tree at the locus at which they occur

Coalescence joins parent and daughter trees

Coalescence joins parent and daughter trees

Coalescence joins parent and daughter trees

3. All parent and daughter loci must coalesce

How many trees are possible with 1 duplication?

Parent locus

Daughter locus

How many branches can the duplicate occur on?

How many branches can the duplicate coalesce on?

How many trees are possible with 1 duplication?

Parent locus

Daughter locus

How many branches can the duplicate occur on? **3**

How many branches can the duplicate coalesce on?

How many trees are possible with 1 duplication?

Parent locus

Daughter locus

How many branches can the duplicate occur on? **3**

How many branches can the duplicate coalesce on? **3**

How many trees are possible with 1 duplication?

How many trees are possible with 1 duplication?

$$\sum_{k=1}^{N=\text{number of species}} \underbrace{\binom{N}{k} \times (2k-3)!!}_{\text{Number of duplication branches}} \times \underbrace{(2N-3)!! \times (2N-1)}_{\text{Number of coalescence branches}}$$

N	Possible Duplication Branches	Possible Coalescence Branches	Total Trees
2	3	3	9
3	9	15	135
4	37	105	3885
5	225	945	212625
6	1881	10395	19552995

Not all gene trees are equally probable

What is the history of this gene tree?

How many duplications?

How many losses?

When did duplication/loss occur?

Which genes are orthologs/paralogs?

reconcLS

reconcLS: A gene tree-species tree reconciliation algorithm that allows for incomplete lineage sorting

Adding introgression

Sarthak Mishra

Rob Lanfear

Introgression

The multispecies network coalescent (MSNC)

Triplet asymmetry to detect introgression

The problem with triplets

What we would like to know

Who is involved in introgression?

What is the direction of introgression?

How many introgression events?

The effects of introgression on gene trees

The effects of introgression on gene trees

The effects of introgression on gene trees

The effects of introgression on gene trees

The effects of introgression on gene trees

“attachment”

How far apart are the attached lineages?

NNI distance

How far apart are the attached lineages?

NNI distance

How far apart are the attached lineages?

How far apart are the attached lineages?

NNI distance

How far apart are the attached lineages?

NNI distance

Attachment Distance = 4 NNIs

DAFT

(Discordant attachment frequency test)

Counting attachment frequencies

Input: all single-copy gene trees and a species tree

Counting attachment frequencies

Output: attachments at all branches of the species tree

Attached to branch E:

F
D
C(B,A)
C
(B,A)
B
A

Counting attachment frequencies

Output: attachments at all branches of the species tree

NNI distance

Attached to branch E:

0	F	565
1	D	311
2	C(B,A)	99
3	C	68
3	(B,A)	59
4	B	12
4	A	14

The effects of introgression on gene trees

Counting attachment frequencies

NNI distance

Attached to branch A:

0	B	501
1	C	299
2	D(E,F)	45
3	D	16
3	(E,F)	13
4	E	2
4	F	50

Calculate a z-test for significance

What we would like to know

What is the direction of introgression?

What is the direction of introgression?

Who moved?

Who moved?

Who moved?

Heuristic: removing the “donor” lineage leads to an incorrect tree

Determining the direction of introgression

NNI rearrangement

Determining the direction of introgression

NNI rearrangement

Determining the direction of introgression

NNI rearrangement

B,**F**,A
C,**F**,(BA)
(CBA),**F**,(DE)
D,**F**,E

Determining the direction of introgression

Determining the direction of introgression

We can also detect bidirectional introgression!

What is the direction of introgression?

What we would like to know

How many introgression events?

Which gene trees are produced by this introgression?

Which gene trees are produced by this introgression?

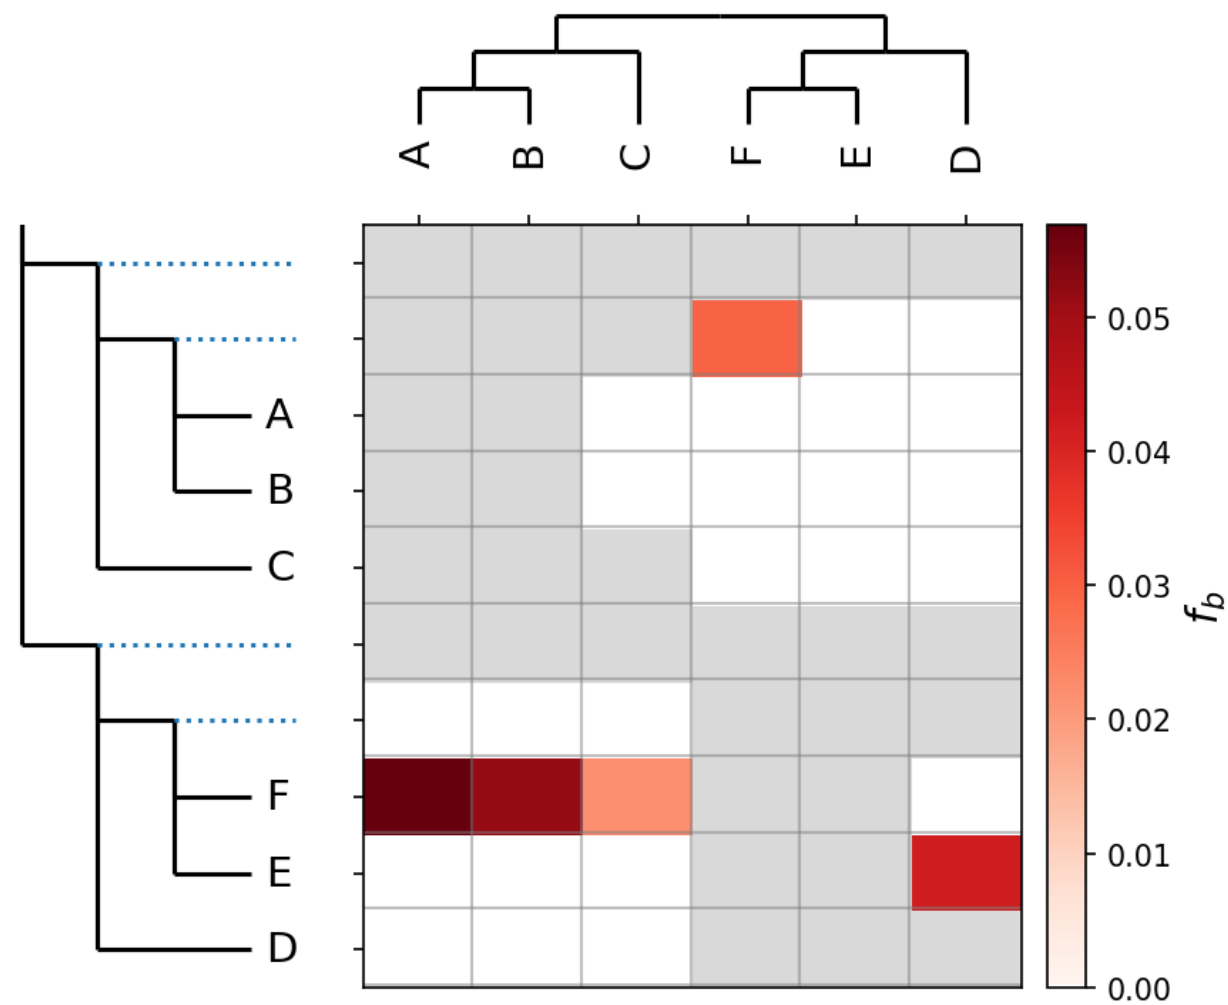

Which gene trees are produced by this introgression?

One introgression, many discordant attachments

One introgression, many discordant attachments

It gets more complicated

It gets more complicated

It gets more complicated

Some rules for combining introgression events

If **donor** is a tip lineage, donor attaches $>$ than all others

If **donor** is a tip lineage, donor attaches $>$ than all others

Some rules for combining introgression events

If **donor** is a tip lineage, donor attaches $>$ than all others

If **donor** is an ancestral lineage, 2 daughter lineages are =

If **donor** is an ancestral lineage, 2 daughter lineages are =

Some rules for combining introgression events

If **donor** is a tip lineage, donor attaches $>$ than all others

If **donor** is an ancestral lineage, 2 daughter lineages are =

If **recipient** is a tip lineage, it is the only one moving

If **recipient** is a tip lineage, it is the only one moving

Some rules for combining introgression events

If **donor** is a tip lineage, donor attaches $>$ than all others

If **donor** is an ancestral lineage, 2 daughter lineages are =

If **recipient** is a tip lineage, it is the only one moving

If **recipient** is an ancestral lineage, 2 daughter lineages are =

If **recipient** is an ancestral lineages, 2 daughter lineages are =

Results from *Drosophila*

What we would like to know

Who is involved in introgression?

What is the direction of introgression?

How many introgression events?

A unified model

Thanks!
